

Violent Crime Rates Continue to Fall Among Juveniles and Young Adults

by Jeffrey A. Butts

In 2010, the number of arrests made by U.S. law enforcement agencies and involving juveniles (under age 18) was estimated to be more than 1.6 million.

Of these, nearly 76,000 involved the four offenses in the FBI's Violent Crime Index: murder (1,000), forcible rape (2,800), robbery (27,000), and aggravated assault (44,900).

When viewed as per capita rates (arrests per 100,000 10-17 year-olds in the U.S. population), the decline in juvenile violence after 2004 is clearly apparent. The total juvenile arrest rate for Violent Index offenses grew from approximately 300 to 500 per 100,000 between 1980 and 1994, dropped to 270 in 2004, and fell to fewer than 250 per 100,000 by 2010.

Arrest rates generally fell for every age group and for all four violent offenses between 1994 and 2004. Violent crime rates fell among young juveniles (under age 15) and older adults (over age 24), but the scale of these changes was overwhelmed by the size of the violent crime drop among older juveniles (ages 15-17) and young adults (ages 18-24).

Except for Robbery, Juvenile Violent Crime Arrests Mirror Young Adults

The declines in the rate of murder arrests involving juveniles and young adults completely reversed the increases seen prior to 1994, bringing murder arrest rates down to levels below those of 1980.

In general, the changing arrest rates for older juveniles mirrored those of young adults during the 1990s and early 2000s. Robbery was the exception. The changes in robbery arrest rates of older juveniles were far more dramatic than those seen among young adults.
